Projects

Mizy
E-bidding

Created responsive mobile views to improve the user experience, designed an admin dashboard for streamlined auction system management, and developed backend APIs to enable real-time auction functionality.

ColleagueChat
Chat application

Developed a comprehensive user interface for real-time messaging, ensured responsiveness across different devices, and implemented an intelligent chat system. Additionally, designed and constructed an admin dashboard for streamlined system management.

Lys
E-Wedding Planner

Created an intuitive and responsive user interface for a wedding planning application, developed the backend server including the design and implementation of the database schema. Additionally, designed and developed an administration panel for efficient management.

AFCE
E-learning

Designed an intuitive UI for an e-learning platform supporting video courses, enabling instructors to seamlessly upload content and users to access it effortlessly. Developed end-to-end functionality to ensure smooth course delivery. Furthermore, optimized the platform for a responsive and engaging learning experience.

EDI Dashboard
ERP, management

Built a digital tool facilitating data exchange between computers, enabling seamless communication. Produced electronic documents for efficient information transmission to banks. Additionally, crafted and enhanced the control panel for improved usability and functionality.
